(See other side for information)

ALS, also called Lou Gehrig's disease, is a disorder of the central nervous system that causes the motor neurons, those connecting the brain and spinal cord to the muscles, to burn out. This leaves the victim progressively paralyzed, even though the mind is unaffected. ALS is universally fatal, in most cases within three to five years from diagnosis. There is currently no effective treatment for ALS.

Extra Hands for ALS

Is a national voluntary service charity assisting people with ALS. Extra Hands is expanding nationally and now operates in many cities in the United States.

Extra Hands for ALS was designed to help people afflicted with ALS and their families, while simultaneously building awareness of the disease through the students who volunteer to visit them.

The money raised in this event will primarily go towards funding the expensive research needed to find a cure for ALS.

PLEASE HELP US MAKE THIS EVENT A GRAND SUCCESS!
